

T W I S T

Tanning Wavelength Intelligent Spectrum Technology

Q. How does the Collatan Twist work?

A. This revolutionary Narrow Spectrum Technology combines the four most important wave-lengths from sunlight into one lamp.

1. UVB for creation of melanin and vitamin D
2. UVA for a dark and healthy looking tan
3. Blue light for cleansing and blemish free skin
4. Red light for skin rejuvenation and soothing

Q. What are the benefits in using the Collatan Twist?

A. Not only do you get that beautiful, dark, long lasting tan that your client desires, but also the benefit of additional collagen stimulation, resulting in:

- Premium Tanning Results
- Rejuvenated Skin
- Younger looking Skin
- Smoothing of Wrinkles
- Production of Vitamin D
- Blemish Free Skin
- Improves Blood Circulation.

Q. Why does the Collatan maxi twist lamp have that unique patented twist throughout the whole of the glass in the lamp?

A. Not only does the twist effect look visually stunning, futuristic and out of this world but more importantly the benefits are that the ergonomically twist design enables the speed of the arc to travel much faster from both diodes on the either end of the lamp. This maximises the performance and stability of the product whilst delivering perfect and natural tanning results.

Q. Can I use the Collatan Maxi Twist in any sunbed?

A. Yes, as long as you have low pressure tanning lamps then we can cater for all your needs. Simply try to quote the model and manufacturer and we will do the rest.

There's a New Twist in Tanning

The Future of Tanning

New and Exclusive to American Leisure

The

TWIST
Tanning Units

(Above: Twist 5200 Exclusive to American Leisure from KBL - see page 30)
